Power

File: Power.kicad_sch

EEPROM 16Kb

CHANGE LOG

- 2023.06.12 (v0.1) : Initial release (but no PCB) 62.5mm x 62.5mm.
- 2023.06.13 (v0.2) : Fault DIP-SW footprint fixed and 0Q on 3v3 removed. 62.5mm -> 63.0mm
- 2023.08.11 (v0.3) : Vend side I/O contains vend/start on 2P side, then remove JAM signal. Power domain feedback resistor has been tuned. 62.5mm -> 65.0mm
- 2023.08.30 (v0.4) : Very weak P-MOS pull-up is applied on the Host Side (Floating Issue - Host Inhibit P1/2) Fix missing Player 1 Start Input routing, 12V track 1.2mm -> 1.4mm, No changes on GPIO config

PCB Side Open Drain Output

CHANGE LOG

Formal arcade system use Game PCB have pull up line on input, and this domain make drop to 0V very safely, even each pin's voltage level is different.

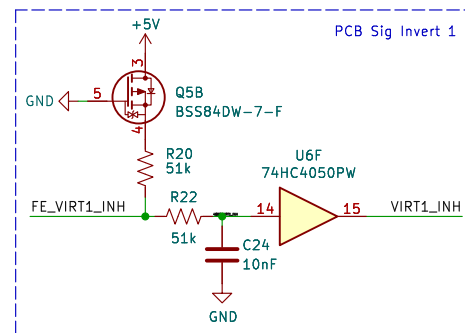

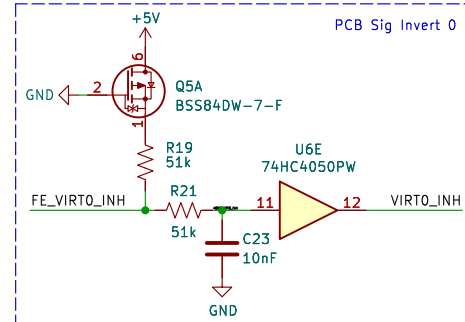

ULN2003AIDR has some issue COM line is shared, so we didn't used for separate voltage level. Q4:7 was changed to PMV100ENEA from IRFL014PBF. Because IRFL014PBF was obsoleted JLCPCB type. JLCPCB Assembly service don't have stock or option for PMV100. DMN100 and PESD_ is alternation for this assembly system.

2020-07-20 : DMN100 or PMV100 NMOS reduce to dual channel NMOS. Recommend is DMN3190LDW and Alternative is DMN2004DWK. Requirements : high density, high current, Volt accept. Gate-D-S Protection.

2023-05-18 :
Dual-N : AO7800, Used for open-drain output
Dual-P : DMP2004VK, Used for inverse voltage input protect.
N+P CH : DMG1016V, N/P role both
Add B330 to inhibit reverse power output.

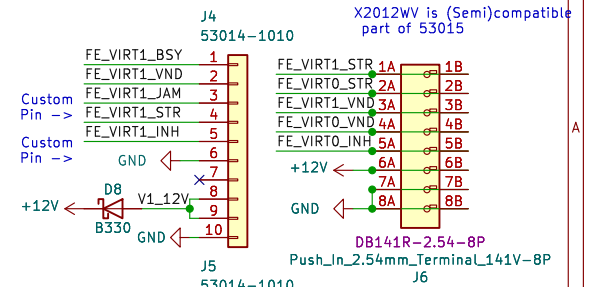

PCB Side extSignal Invert Input

Vend side has 4.7kΩ.
But host and counterside host has res
Thus 10kΩ

Emulated player 1/2 side common signal
(Paper Acceptor, start button etc)

VIRT0_BSY → VIRT0_BSY
VIRT0_VND → VIRT0_VND
VIRT0_JAM → VIRT0_JAM
VIRT0_STR → VIRT0_STR

VIRT1_BSY → VIRT1_BSY
VIRT1_VND → VIRT1_VND
VIRT1_JAM → VIRT1_JAM
VIRT1_STR → VIRT1_STR

VIRT0_INH → VIRT0_INH
VIRT1_INH → VIRT1_INH

Vend Side Pull Up Input

CHANGE LOG

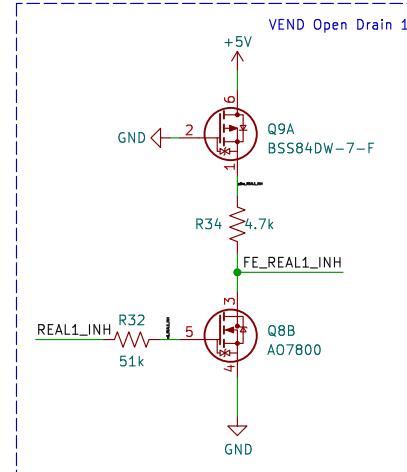

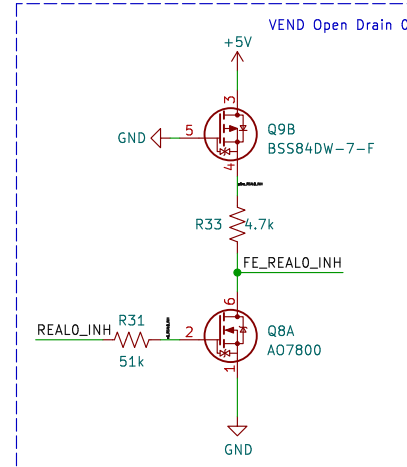

2020-07-16 : LTV217 Optocoupler is removed.
Replaced to high voltage input hex inverter.
TI CD4049UBDR recommend 1uA input.
TI require too few input current. So this design use
"ONSem MC14049UBDR2G", "Nxp HEF4049BT"

2020-07-20 : DMN100 or PMV100 NMOS reduce
to dual channel NMOS. DMN3190LDW or DMN2004DWK
Recommend is DMN3190LDW. Alternative is DMN2004DWK
Requirements : high desity, high current and voltage accept.
Gate,D-S Protection.

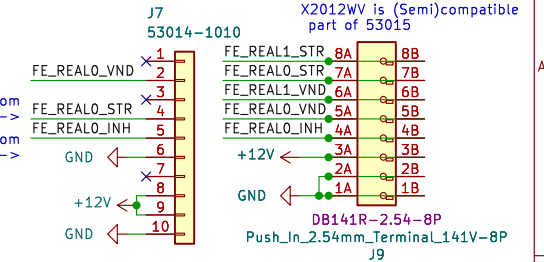

2023-05-18 :
Dual-N : A07800, Used for open-drain output
Dual-P : DMP2004VK, Used for inverse voltage input protect.
N+P CH : DMG1016V, N/P role both

2023-08-11 :
Dual-P : DMP2004VK changed to BSS84DW for bigger package
N+P CH : Remove DMG1016V for reduce BOM

Vend Side Push Pull Active Low

Player 1 side common signal
(Paper Acceptor, start button etc)

Player 2 side purchase/start button and led

REAL0_VND → REAL0_VND
REAL0_STR → REAL0_STR
REAL1_VND → REAL1_VND
REAL1_STR → REAL1_STR
REAL1_INH → REAL1_INH
REAL1_VND → REAL1_VND

Card payment acceptor mocking board
